Parsec arcade black screen

Options Clear This Stupid Warning!! Or... wait, you should probably pay attention to it. It can really ruin your game. O_O Copy and paste the following into the:-window field This will cause the game to start in windowed mode. Set the correct in-game monitor resolution, under Help and Options > Game settings > resolution. You can also swap in full-screen mode here, but be sure to go back and delete: from the startup options box later, or you'll have to change the settings every time you download it. Was this article helpful? 1 in 4 found it helpful Have more questions? Send a request I have a problem with the black screen when connecting the host. I connect the host, but there is only a black screen and a mouse pointer. Firs time when I connected to dissequer it worked well. In another connection, a black screen began. I'm sure I chose a genuine video card (Generic Monitor PnP), but when I start parsec on the client's choice parsec default is Generic No PnP Monitor. I choose manually. Please help me! I can not reproduce VM every time street rage 4 > General discussions > Topic Details Parsec question Hello there, for those who parsec users there, I have a strange problem. The game works perfectly, but when I start hosting, the main menu goes black (I hear all the sounds, but the main menu is to stay black). If I play at a certain level though, it works until I get back to the main menu. So, if anyone knows how to solve this problem, I would be glad = p Last edited froh; 1 May, 2020 @ 4:23am This can be played on Steam Remote Playback and Direct Connection on Parsec (Desktop Demo). Note: This is only for reporting spam, advertising and problematic (harassment, struggle or rudeness) messages. RTX maps have a special requirement to enable H.265. In client settings, turn on H.265 mode and compatibility mode. This will allow H.265, but it may slightly increase your delay. Both must be installed on the On for H.265 to work with the RTX card as a client. I have a problem with the black screen on parsec. There is a black screen on parsec when you connect the host. Fisrt time it worked well then I restarted the system. Then there was the problem with the black screen. Please help solve this issue! Hello, I have a problem with my overwatch game while using gaming streaming service Parsec. I played overwatch on a rented computer until I get a black screen when im playing. I believe it's your anti anti System. Please fix 1 How it is not anti cheat system. If it was, you would be logged out and your account would be specifically listed as prohibited when you try to log in again. This sounds like an overlay system incompatibility, and you'll need to check with support for this software that you're using. Ok, I'll check it out and see if something changes I've solved the problem. About the case if someone else is looking for this error is a solution (in my case): Make sure you're running overwatch in full-screen mode, go to game settings and select full screen display mode. It doesn't matter if you're using Parsec on a client computer in windowed mode, borderless, or full-screen mode, just make sure the overwatch is set to full screen mode inside the in-game options menu. Hopefully it works for anyone else too. I try to place some emulators through the Parseca arcade. Emulators and games work perfectly outside the parsec. They even work in share PC mode just fine with other players, but I can't make it work in the Parsec arcade. I only get audio and no video, but I see the parsec overlay button in the top left corner and right when the game starts, I see a quick glance at it before the parsec overlay logo appears and the screen goes black. I can still enter the chat box and see the answers and my controller works (I can tell with audio signals despite not having a video). I know these emulators work with parsec because they are listed as compatible with the Parsec arcade on parsec's own website (pcsx2, cemu, dolphin, etc.) and I played with other people who post on these emulators, so I know it's possible. I just don't know what the problem is. I changed every setting in parsec and my emulator relating to resolution. I closed all overlay programs. I upgraded the graphics drivers to the latest version. I'm all out of ideas as to what it might be. Does anyone have any ideas? In some situations, you may receive a black screen on the computer that connects to the hosting computer. There are usually two reasons for this. YOU ARE TRYING TO HOST A GAME WITH ARCADE, BUT YOUR GPU DOES NOT SUPPORT HOSTING You need to check that your GPU supports hosting here YOUR GAME IS RUNNING IN FULL SCREEN MODE Many games run initial credits in full screen mode and your Parsec stream can be installed at a different resolution than the one that the game believes is full-screen by your computer. This causes a black screen. You can either fix it by directly forcing the game into window mode in its configuration file. Typically, a file is a text file in a document folder in Steam or a game. If you can't find this, we recommend using Google to find the configuration file on your computer. Some games will go into window mode if you press the Windows logo key + d. make sure that immersive Parsec mode is enabled, which you can enable with the keyboard shortcut Ctrl + alt + i. STREAMING INCORRECT MONITOR If you have multiple monitors on the guest guest Parsec may select an incorrect monitor to stream. This can cause a black screen if this monitor is not connected directly to the GPU. You can quickly switch monitor using Parsec settings on the desktop, or you can use the Windows logo key + P and double-click the down arrow to duplicate all displays. Please make sure that you have the Parsec option in immersive mode using the shortcut ctrl + alt + i. i.
